Professional Summary

Software Developer with 4.5+ years of experience engineering scalable backend systems, microservices, and AI-powered enterprise platforms using Golang, Python, TypeScript, and modern cloud technologies. Experienced in fintech platforms, distributed architectures, and workflow automation, with hands-on expertise in full-stack system design, GenAI integrations, and high-throughput backend services. Proven track record of designing reliable REST/gRPC APIs, optimizing system performance, and delivering production-grade solutions across cross-functional Agile teams.

Technical Skills

Languages & Frameworks: Golang, Python, TypeScript, JavaScript, FastAPI, Gin, GORM, React.js, Node.js, REST APIs, gRPC, SQL

AI & Automation: RAG (Retrieval-Augmented Generation), Google Vertex AI, Gemini, GenAI Integrations

Cloud & DevOps: AWS, Google Cloud (Cloud Run, GCS), Docker, Kubernetes, Jenkins, GitHub, Bitbucket, CI/CD

Databases & Messaging: PostgreSQL, MySQL, DGraph, Redis, RabbitMQ, Kafka

Architecture & Practices: Microservices, Distributed Systems, RBAC, API Security, System Design, TDD, Agile

Professional Experience

Thoughtworks

Consultant Developer

Pune, India

June 2025 – Present

- Helios Platform (Full-Stack Enterprise Workflow System):** Tech: Python, FastAPI, TypeScript, React, Node.js, PostgreSQL, Docker, RBAC, REST APIs.
- Architected and developed a full-stack, modular enterprise platform from scratch, delivering scalable backend services, secure API layers, and production-grade frontend workflows for risk and operations use cases.
- Built and optimized the Questionnaire module, driving 85% ROI through process automation, reduced manual intervention, and faster decision workflows.
- Delivered the Contract Review module with 50% ROI by improving review efficiency, standardizing validation logic, and reducing cycle time across stakeholders.
- Implemented role-based access control (RBAC), permission management, and audit logging to strengthen application security, compliance readiness, and governance.
- Containerized and deployed services with Docker-based workflows, improving release consistency, environment parity, and developer onboarding speed.
- Owned end-to-end SDLC execution: system design, feature development, testing, documentation, and cross-functional production rollout.

Zoop.one Ltd

Software Development Engineer

Pune, India

Jan 2025 – June 2025

- Middleware for Challan Payment:** Designed and implemented a high-throughput middleware service to streamline the challan payment process, enhancing system efficiency and transaction reliability within 3 months.
- High-Performance Worker Pool:** Built a concurrent worker pool leveraging Golang goroutines and channels to efficiently process asynchronous tasks, improving system throughput and resource utilization.
- Service Layer Testing:** Developed comprehensive unit and integration test suites for the service layer, ensuring robust, fault-tolerant functionality and high code coverage.

- **Enhanced Loan Origination Platform (LOS):** Built and maintained a scalable loan origination app with a Golang backend and React frontend, optimizing API throughput and latency for high traffic.
- **Data Handling & Third-Party Integrations:** Managed Dgraph and MySQL databases; integrated third-party fintech services (Plaid, Clear, Persona, Ocrolus), boosting submission rates and platform functionality.
- **System Performance & Stability:** Implemented RabbitMQ for asynchronous message queuing and Redis caching, reducing server load and leading to a 40% reduction in production bugs.
- **CI/CD Automation:** Leveraged Bitbucket and Jenkins pipelines for automated deployments, reducing release cycle time by 70% and streamlining CI/CD workflows.
- **Agile & Cross-Functional Collaboration:** Actively participated in Agile sprints, authored technical approach documentation, and collaborated with QA, BAs, and Product Managers to ensure reliable deliveries.

Key Projects & Technical Contributions

- **Fintech Middleware & Transaction Engine** (*Golang, RESTful API, PostgreSQL, Kafka, Gin, GORM, Crons*): Architected high-reliability middleware orchestrating payment verification, scheduled cron routines, and message processing pipelines.
- **Loan Origination Platform (LOS)** (*Golang, gRPC, Microservices, Dgraph, MySQL, Redis, RabbitMQ, etcd*): Designed distributed microservices handling borrower evaluations, verification integrations, and concurrent data synchronization.
- **Borrower Portal & Back-Office Management** (*React.js, JavaScript, TypeScript, Microservices*): Built responsive interfaces and role-based back-office workflows for loan officers and end-users.
- **Reward Management System** (*Golang, PostgreSQL, Docker*) – [GitHub Link](#): Developed a multi-tenant points and loyalty management system with automated reward calculation, distributed transaction logs, and real-time event triggers.

Awards & Accomplishments

- **Spot Award (April 2024, October 2024):** Awarded for outstanding technical performance, rapid feature delivery, and ownership under tight deadlines.
- **Client Appreciations:** Received multiple formal commendations from enterprise clients and stakeholders for delivering high-impact, fault-tolerant solutions.

Education

Vishwakarma Institute of Information Technology <i>Bachelor of Technology in Computer Science – CGPA: 8.87 / 10</i>	Pune, India Aug 2018 – Apr 2022
Tiny Tots Public School <i>Senior Secondary (12th Grade, RBSE) – Marks: 80%</i>	Barmer, Rajasthan Apr 2016 – Mar 2017
